Certificate

This is certifying that the project report **“Semester internship project report on Cosmetic Insights : Navigating Cosmetics Trends and Consumer Insights with Tableau”** are bona fide work done and Submitted by **“REVURU CHENCHU NANI (0225046046), KOTAKONDA ANIL (0225046065), KAMASANI PREM CHANDU (0225046019), KONGARA PRAKASH (0225046023) ”**, In Partial Full Filament of the requirements for the award of the Degree of Computer Applications by the affiliated to SRI VENKATESWARA UNIVERSITY, TIRUPATI, during the Year 2025 – 2026

PROJECT GUIDE

PRINCIPAL

Head of the Department

External Examiner

ACKNOWLEDGEMENT

We would like to express our gratitude to all those who have been instrumental in the presentation of this project.

We are very much grateful to **Mr. P. RAVI VENKATESH, B.E.,** Correspondent of **GAYATRI DEGREE COLLEGE,** for his great support.

We are very much grateful of **Mrs. P. LAKSHMI, M.A.,** **Director** of **GAYATRI DEGREE COLLEGE,** for her great support.

We are thankful to **Dr. P. VENUGOPAL RAO, M.Sc, M.Phil, PhD, MBA, PRINCIPAL** of **GAYATRI DEGREE COLLEGE,** for giving her continuous support to our internship.

We are happy to express our gratitude to **Mr. P. MADHU SUDHAN, M.Sc. (Computer Science).** **Lecturer in Computers, GAYATRI DEGREE COLLEGE,** for his constant motivation and valuable support for completing the internship.

It gives us pleasure to acknowledge our indebtedness to **All Teaching Faculties** and we are very much thankful to **our parents** for their substantial moral support and encouragement in our studies.

Place: TIRUPATI

Date:

DECLARATION

We hereby declare that the Project Work Entitled **“Semester internship project report on Cosmetic Insights : Navigating Cosmetics Trends and Consumer Insights with Tableau”** is record of Group Research Work and, it has been carried out by us During the period of our study, Submitted to **SRI VENKATESWARA UNIVERSITY, TIRUPATI** under the Supervision of **Mr. P. MADHU SUDHAN, M.Sc (Computer Science), Lecturer in Computers, GAYATRI DEGREE COLLEGE, TIRUPATI.**

The award of the Degree of Bachelor of Computer Applications is our original work, has not been submitted to any other university for the award of any Degree.

Date:

Place:

Signature of the Students

CHAPTER – 01

INTRODUCTION

1.1 – Project Overview

Cosmetic Insights is a data analytics and visualization project developed using Tableau to analyse trends, customer behaviour, and product performance in the cosmetics and beauty industry. The project focuses on transforming large volumes of sales, customer, and product data into meaningful insights through interactive dashboards and visual reports.

The primary objective of the project is to help businesses understand consumer preferences, market trends, and sales performance across various cosmetic categories such as skincare, makeup, haircare, fragrances, and personal care products. By analysing historical sales data and customer purchasing patterns, the project enables organizations to identify high-performing products, evaluate market demand, and optimize inventory management.

The project utilizes Tableau's advanced visualization capabilities to create dynamic dashboards that display key performance indicators, revenue trends, customer demographics, product performance metrics, and regional sales analysis. Users can interact with the dashboards using filters and drill-down features to gain deeper insights into specific products, customer segments, and geographic locations.

Cosmetic Insights also provides valuable consumer insights by analysing demographic factors such as age, gender, and purchasing behaviour. These insights help organizations design targeted marketing campaigns, improve customer engagement, and enhance overall customer satisfaction. In addition, the project supports brand and product performance analysis by evaluating sales growth, customer ratings, and revenue contribution.

Regional and trend analysis features allow businesses to identify emerging market opportunities and changing consumer preferences. The project demonstrates the importance of business intelligence and data-driven decision-making in the cosmetics industry by converting complex datasets into easy-to-understand visualizations.

Overall, Cosmetic Insights serves as a comprehensive Tableau-based analytics solution that helps cosmetic companies make informed business decisions, improve operational efficiency, optimize marketing strategies, and drive sustainable growth through actionable insights and interactive data visualization.

Cosmetic Insights – Navigating Cosmetics Trends and Consumer Insights with Tableau

1.2 – Purpose of the Project

Cosmetic Insights – Navigating Cosmetics Trends and Consumer Insights with Tableau

Cosmetic Insights is a data analytics and visualization project developed using Tableau to analyse and understand trends within the cosmetics and beauty industry. The project focuses on transforming raw sales, customer, and product data into meaningful insights through interactive dashboards and visual reports. In today's competitive cosmetics market, businesses require accurate and timely information to understand customer preferences, monitor product performance, and make informed strategic decisions. This project addresses these needs by providing a comprehensive business intelligence solution that enables organizations to explore market trends and consumer behaviour effectively.

The project analyses cosmetic product sales across multiple categories, including skincare, makeup, haircare, fragrances, and personal care products. Through Tableau dashboards, users can monitor key performance indicators such as revenue, sales growth, customer demographics, and regional performance. The project also provides valuable consumer insights by examining purchasing patterns, age groups, gender distribution, and geographic trends. These insights help businesses identify target customers and develop personalized marketing strategies.

In addition, Cosmetic Insights evaluates product and brand performance by analysing sales volume, revenue contribution, customer ratings, and market share. Interactive visualizations allow stakeholders to compare products, identify top-performing categories, and recognize areas for improvement. Geographic analysis further helps organizations understand regional demand and uncover potential market opportunities.

The project demonstrates the power of data visualization and business intelligence in supporting data-driven decision-making. By converting complex datasets into easy-to-understand dashboards, Cosmetic Insights enables businesses to optimize marketing efforts, improve inventory management, enhance customer satisfaction, and drive revenue growth. Overall, the project provides actionable insights that help cosmetic companies better understand their market, respond to changing consumer preferences, and achieve sustainable business success.

CHAPTER – II

IDEATION PHASE

2.1 – Problem Statement

The cosmetics industry is growing very fast, and customer preferences change frequently. New products are launched regularly, and customers are influenced by trends, advertisements, social media, and seasonal changes. Because of this, cosmetic companies generate large amounts of data every day, including sales data, product details, customer information, and market trends. However, this data is often complex and difficult to understand when it is stored in raw tables or simple reports.

Many companies face difficulty in analysing this large amount of data in a meaningful way. They may not clearly understand which products are performing well, which products are not selling, or which customer groups are buying specific items. It also becomes hard to identify which regions have high demand and which areas need improvement. Without clear analysis, businesses may miss important opportunities and fail to respond quickly to market changes.

Another major issue is the lack of proper visualization tools for decision-making. When data is not presented in a visual and interactive format, it becomes difficult for managers and decision-makers to study patterns and trends. This often leads to decisions being made based on assumptions rather than actual data. As a result, companies may face problems such as incorrect inventory planning, weak marketing strategies, and low customer satisfaction.

Cosmetic companies also struggle to understand customer behaviour in detail. Customers differ based on age, gender, location, income, and personal preferences. Without proper analysis, it is difficult to know what different customer groups prefer and how their needs are changing over time.

To solve these problems, there is a need for a simple, effective, and interactive system that can analyse cosmetics data and present it in an easy-to-understand way. Businesses need a tool that can convert raw data into meaningful insights and visual reports so that decision-makers can quickly understand the situation and take action.

The Cosmetic Insights – Navigating Cosmetics Trends and Consumer Insights with Tableau project addresses these challenges by using Tableau to create interactive dashboards and visualizations. These dashboards bring all important data into one place and present it in the form of charts, graphs, and maps. This helps users easily understand sales performance, customer behaviour, product popularity, and market trends.

It helps cosmetic companies make better decisions, improve performance, increase customer satisfaction, and stay competitive in the fast-changing cosmetics market.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

2.2 – Empathy Map Canvas

The Empathy Map Canvas helps understand cosmetic consumers' needs, behaviours, and preferences. Consumers look for products that suit their skin type, follow beauty trends, read reviews, and seek recommendations before purchasing. Tableau helps companies analyse consumer preferences and market trends to improve customer satisfaction.

Key Points

1. Who Are We Understanding?

- Skincare and cosmetic consumers.
- Beauty enthusiasts.
- People with different skin types.
- Online shoppers.

2. Goals

- Find suitable products.
- Make informed decisions.
- Discover trending beauty products.
- Improve skincare routines.

3. What Do They See?

- Beauty tutorials on social media.
- Clean Beauty and K-Beauty trends.
- Product recommendations.
- Online advertisements.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

4. What Do They Say?

- Is this product right for my skin
- I want products that work.
- There are too many choices

2.3 – Brainstorming

This framework helps analyze trends and consumer behavior using Tableau. The project starts by finding problems in the cosmetics industry. These problems include understanding changing consumer preferences and new beauty trends. Data is collected from media, product reviews and retail sources. This data is then connected to Tableau for analysis. The analysis helps find ingredients, customer feelings and market trends. By combining information with consumer behavior more insights can be generated. Finally Tableau dashboards show recommendations that help businesses develop products and improve customer satisfaction.

Key Steps

1. Problem / Goal

- Define the cosmetic trend challenge.
- Identify business objectives.
- Understand what consumers need and want.

2. Data Preparation & Ingestion

- Collect data on products.
- Connect media and retail data to Tableau.
- Prepare data for analysis.

3. Initial Analysis

- Identify beauty trends.
- Analyze customer reviews and feelings.
- Find ingredients and products.

Cosmetic Insights – Navigating Cosmetics Trends and Consumer Insights with Tableau

4. Deeper Insights

- Link trends with consumer demographics.
- Analyze how people buy by age groups.
- Understand customer preferences and patterns.

5. Tableau Actionable Insights

- Create dashboards.
- Provide product recommendations.
- Highlight label and trending products.
- Support business decisions, with data.

CHAPTER – III REQUIREMENT ANALYSIS

3.1 – Customer Journey Map

1. Need Stage

- Customer identifies skincare or beauty concerns.
- Looks for solutions for acne, dryness, pigmentation, or aging.
- Influenced by advertisements, social media, and beauty trends.
- Creates awareness of cosmetic product requirements.

2. Awareness Stage

- Discovers cosmetic brands and products.
- Searches through Google, Instagram, YouTube, and beauty blogs.
- Learns about product features and benefits.
- Gains knowledge about available market options.

3. Consideration Stage

- Compares products from different brands.
- Evaluates ingredients, quality, and safety.
- Reads customer reviews and ratings.
- Considers price and skin-type suitability.

4. Decision Stage

- Selects the most suitable cosmetic product.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

- Compares final pricing and offers.
- Purchases through online or offline stores.
- Influenced by discounts and recommendations.

5. Delivery Stage

- Receives order confirmation and tracking details.
- Monitors shipment status.
- Evaluates packaging and delivery service.
- Expects timely and secure product delivery.

6. Usage Stage

- Uses the cosmetic product.
- Assesses effectiveness and quality.
- Evaluates fragrance, texture, and results.
- Shares feedback and experiences.

Customer Journey Map

PROJECT TITLE	Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
MAX MARKS	2 MARKS

3.2 – Solution Requirement

The **Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau** project aims to analyse cosmetic industry data and generate valuable insights into consumer preferences, product trends, and brand performance. The project requires a structured dataset containing product names, brands, categories, prices, ratings, reviews, ingredients, and skin-type suitability. Tableau Desktop is used for data visualization, dashboard creation, and storytelling, while Excel or CSV files serve as data sources. The system should support efficient processing of large datasets and provide interactive dashboards for analysis.

The solution includes visualizations such as category-wise product distribution, top-performing brands, price analysis, skin-type suitability analysis, and customer review trends. Interactive filters, charts, and graphs help users explore data and identify market patterns. The dashboards should be user-friendly, responsive, and easy to understand for analysts, students, researchers, and industry professionals.

By meeting these requirements, the project enables businesses to understand customer behaviour, evaluate brand performance, identify market opportunities, and make data-driven decisions. Tableau transforms raw cosmetic data into actionable insights, helping organizations improve customer satisfaction and achieve sustainable growth in the competitive cosmetics industry.

3.3 – Data Flow Diagram

The Data Flow Diagram (DFD) of Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau illustrates the flow of cosmetic product data from collection to visualization. The process starts with importing cosmetic datasets from Excel or CSV files into Tableau. The data is then cleaned, validated, and analysed based on product categories, brands, prices, and skin types. Using calculated fields and visual analytics, Tableau creates interactive dashboards and stories that provide valuable insights into consumer preferences, market trends, and product performance. These insights help businesses make informed decisions and improve their marketing and product strategies.

Important Points

- Collect cosmetic data from Excel/CSV files.
- Import and prepare data in Tableau.
- Clean and validate the dataset.
- Analyse brands, categories, prices, and skin types.
- Create interactive dashboards and stories.
- Generate consumer and market insights.
- Support data-driven business decision-making.

3.4 – Technology Stack

Technology Stack

Hardware Requirements

- **Processor (CPU):** AMD Ryzen 5
- **Memory (RAM):** 16 GB
- **Storage:** 256 GB SSD or higher (Recommended)
- **Display:** 1366 × 768 resolution or higher
- **Internet Connection:** Required for software updates and data sharing

Software Requirements

- **Operating System:** Windows 10/11 (64-bit)
- **Data Visualization Tool:** Tableau Desktop
- **Spreadsheet Software:** Microsoft Excel
- **Programming Language:** Python
- **Integrated Development Environment (IDE):** PyCharm
- **Version Control System:** Git

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Technology Stack Overview

Layer	Technology
Data Collection	Microsoft Excel, CSV Files
Data Processing	Python
Data Visualization	Tableau Desktop
Development Environment	PyCharm
Version Control	Git
Reporting & Insights	Tableau Dashboards and Stories

This technology stack supports the **"Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau"** project by enabling efficient data collection, processing, analysis, visualization, and report generation.

CHAPTER – IV PROJECT DESIGN

4.1 – Problem Solution Fit

The cosmetics industry faces challenges in understanding customer preferences, identifying market trends, and evaluating brand performance due to the large volume of product data available. Consumers also find it difficult to choose products that match their skin type, needs, and budget. Traditional data analysis methods are often complex and time-consuming, making it difficult for businesses to gain meaningful insights.

The Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau project addresses these challenges by using Tableau to transform raw cosmetic data into interactive dashboards and visual reports. The solution analyses product categories, brand performance, pricing, ratings, reviews, and skin-type suitability, helping users identify trends and consumer preferences quickly and effectively.

Through interactive visualizations, businesses can compare brands, analyse product distribution, understand customer behaviour, and make data-driven decisions. The project bridges the gap between complex cosmetic data and actionable business insights, enabling organizations to improve customer satisfaction, identify market opportunities, and achieve sustainable growth in the competitive cosmetics industry.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

TEAM ID	SWTID-2026-3007
PROJECT TITLE	Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
MAX MARKS	5 MARKS

4.2 – Proposed Solution

The Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau project provides a data-driven solution for analysing cosmetic industry data and understanding consumer preferences. Using Tableau, raw cosmetic data is transformed into interactive dashboards and visual reports that help businesses identify market trends, evaluate brand performance, and make informed decisions.

The solution uses a structured dataset containing product details such as brand, category, price, ratings, reviews, ingredients, and skin-type suitability. After data cleaning and preparation, Tableau dashboards are created to analyse category-wise product distribution, top brands, pricing patterns, customer reviews, and skin-type preferences.

Interactive charts, filters, and visualizations enable users to explore data easily and gain meaningful insights into consumer behaviour. The dashboards support business decision-making by highlighting popular products, emerging trends, and market opportunities. Overall, the proposed solution helps cosmetic companies, researchers, and analysts convert complex data into actionable insights, improve customer satisfaction, optimize business strategies, and achieve growth in the competitive cosmetics industry.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

TEAM ID	SWTID-2026-3007
PROJECT TITLE	Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
MAX MARKS	5 MARKS

4.3 – Solution Architecture

The Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau project follows a structured solution architecture that transforms raw cosmetic product data into meaningful business insights through data visualization and analytics. The architecture consists of multiple layers, including data collection, data preparation, data analysis, visualization, and reporting. These layers work together to provide a comprehensive understanding of cosmetic market trends, consumer preferences, and brand performance.

The first layer is the Data Source Layer, where cosmetic product data is collected from Excel spreadsheets or CSV files. The dataset contains important information such as product names, brands, categories, prices, ratings, reviews, ingredients, and skin-type suitability. This data serves as the foundation for all analytical activities within the project.

The second layer is the Data Preparation Layer, where the collected data is cleaned, validated, and organized. Missing values, duplicate records, and inconsistencies are removed to improve data quality and ensure accurate analysis. Proper data preparation helps create reliable visualizations and meaningful insights.

The third layer is the Analytics Layer, which uses Tableau Desktop to process and analyse the prepared data. Various analytical techniques are applied to evaluate category-wise product distribution, top-performing brands, average product prices, skin-type suitability, customer review patterns, and market trends. Tableau's calculated fields, filters, and parameters enhance analytical capabilities and allow deeper exploration of the data.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Overall, the solution architecture provides a systematic framework for collecting, processing, analysing, and visualizing cosmetic industry data. By leveraging Tableau's powerful business intelligence features, the architecture transforms raw data into actionable insights, enabling organizations to make data-driven decisions and gain a competitive advantage in the cosmetics industry.

CHAPTER – V

PROJECT PLANNING AND SCHEDULING

5.1 – Project Milestones & Tasks

1. Data Collection:

Collect cosmetic product data from Excel files, CSV files, online datasets, and databases. The data includes product categories, brands, prices, ratings, ingredients, skin types, and customer reviews.

2. Data Preparation:

Clean the collected data by removing duplicate records, handling missing values, and standardizing product information. This makes the data ready for analysis in Tableau.

3. Data Visualization:

Import the prepared dataset into Tableau and create charts, graphs, and visual reports to understand cosmetic trends and consumer preferences.

4. Dashboard Creation:

Develop interactive dashboards displaying key metrics such as total products, average ratings, top brands, and category performance. Add filters for easy data exploration.

5. Story Development:

Create a Tableau Story to present insights in a logical sequence. Highlight market trends, customer behaviour, and product performance to support decision-making.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

6. Performance Testing:

Test dashboard accuracy, responsiveness, and loading speed. Ensure calculations, filters, and visualizations work correctly and efficiently.

7. Web Integration:

Publish the Tableau dashboard and integrate it into a website using HTML, CSS, Bootstrap, and Flask for online access and interactive viewing.

8. Project Demonstration & Documentation:

Demonstrate the complete project workflow and prepare documentation covering objectives, methodology, dashboards, results, and user guidelines.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

5.2 – Sprint Delivery Plan

Sprint Plan – Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Total Duration: 32 Days

Sprint Day(s)	Task	Description
Day 1 – Day 18	Smart Bridge Live Sessions	Attend live training sessions, learn Tableau concepts, data visualization, dashboard creation, and project guidance.
Day 19	Data Collection	Collect cosmetic product data from Excel, CSV files, online datasets, and other sources.
Day 20	Data Connectivity	Connect the collected data to Tableau Desktop and verify data integrity.
Day 21	Data Preparation	Clean, transform, and organize data by handling missing values and standardizing fields.
Day 22	Dashboard & Story Creation	Design interactive dashboards and create Tableau stories to present insights effectively.
Day 23	Tableau Public Upload	Publish dashboards and stories on Tableau Public for sharing and accessibility.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sprint Day(s)	Task	Description
Day 24 – Day 25	Web Integration	Integrate Tableau dashboards into the Flask web application using HTML, CSS, and Bootstrap.
Day 26 – Day 28	Documentation	Prepare project documentation including abstract, architecture, methodology, results, and conclusion.
Day 29 – Day 30	Demo Video Creation	Record and edit a project demonstration video explaining features and insights.
Day 31 – Day 32	Project Deployment	Deploy the Flask application and ensure proper functionality of dashboards and web pages.

Sprint Deliverables

Sprint 1 (Day 1 – Day 18)

- Completion of SmartBridge Live Sessions
- Understanding of Tableau and project requirements

Sprint 2 (Day 19 – Day 23)

- Data collection and preparation completed
- Tableau dashboard and story created
- Tableau Public link generated

Sprint 3 (Day 24 – Day 28)

- Web integration completed
- Project documentation finalized

Sprint 4 (Day 29 – Day 32)

- Demo video prepared
- Project successfully deployed and ready for presentation

Outcome: A fully functional Tableau-based analytics project, integrated with a web application, documented, deployed, and ready for final evaluation.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

5.3 – Project Progress Tracking

Zoho Cliq is a team communication and collaboration platform used to facilitate project coordination, real-time communication, and progress tracking among team members. In the Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau project, Zoho Cliq helps the team stay connected, share updates, discuss project requirements, and monitor daily progress effectively.

Key Features of Zoho Cliq Used in the Project:

- **Instant Messaging:** Enables quick communication among team members for project discussions and updates.
- **Team Channels:** Creates dedicated channels for project-related conversations and collaboration.
- **File Sharing:** Allows easy sharing of datasets, documents, dashboard screenshots, and project resources.
- **Task Updates:** Helps team members report completed tasks and ongoing activities.
- **Notifications and Reminders:** Keeps the team informed about important deadlines, meetings, and project milestones.
- **Collaboration Support:** Facilitates smooth coordination between team members during development and deployment phases.

Project Progress Tracking Process:

1. Create a dedicated project channel in Zoho Cliq.
2. Share project objectives, timelines, and sprint plans with the team.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

3. Provide daily or weekly progress updates.
4. Discuss challenges and identify solutions collaboratively.
5. Share project documents, reports, and dashboard outputs.
6. Monitor task completion and milestone achievements.
7. Conduct review meetings and finalize deliverables.

Benefits of Using Zoho Cliq:

- Improves team communication and coordination.
- Enables real-time project status updates.
- Reduces communication delays and misunderstandings.
- Simplifies document and file sharing.
- Helps track project milestones and deadlines efficiently.
- Enhances overall team productivity and collaboration.

Conclusion:

Zoho Cliq serves as an effective communication and project-tracking tool for the Cosmetic Insights project. By supporting real-time collaboration, progress monitoring, and information sharing, it helps the team complete project activities efficiently and achieve project goals within the planned schedule.

5.4 – Team Management Tool for Agile Planning (Jira)

Jira is an agile project management and issue-tracking tool used to plan, organize, and monitor project activities efficiently. In the Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau project, Jira helps the team manage tasks, track progress, assign responsibilities, and ensure timely completion of project deliverables.

Key Features of Jira Used in the Project:

- **Sprint Planning:** Organizes project activities into manageable sprints with defined goals and timelines.
- **Task Management:** Creates and assigns tasks such as data collection, data preparation, dashboard development, web integration, and documentation.
- **Progress Tracking:** Monitors the status of tasks through stages like To Do, In Progress, and Done.
- **Team Collaboration:** Enables team members to communicate, share updates, and coordinate project activities.
- **Issue Tracking:** Identifies and resolves project challenges efficiently.
- **Reporting and Analytics:** Provides visual reports and sprint summaries to evaluate project performance.

Jira Workflow for the Project:

1. Create project backlog and define project requirements.
2. Plan sprint activities based on project milestones.
3. Assign tasks to team members.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

4. Track task progress using Jira boards.
5. Conduct regular reviews and update task status.
6. Resolve issues and manage project risks.
7. Complete sprint goals and evaluate outcomes.

Benefits of Using Jira:

- Improves project organization and transparency.
- Enhances team collaboration and communication.
- Supports Agile methodology and sprint-based development.
- Helps meet project deadlines effectively.
- Provides real-time visibility into project progress.

Conclusion:

Jira plays a crucial role in managing the Cosmetic Insights project by supporting Agile planning, task tracking, team collaboration, and project monitoring, ensuring the successful completion of all project activities within the planned timeline.

CHAPTER – VI

PROJECT DEVELOPMENT

6.1 – Pre-Requisites

Tableau Installation

To develop the Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau project, Tableau Desktop must be installed on your local system. Follow the steps below to install and set up Tableau Desktop.

Step 1: Visit the Tableau Official Website

1. Open your web browser.
2. Go to the official Tableau website: [Tableau Official Website](https://www.tableau.com)
3. From the homepage, select the Products menu.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Step 2: Explore Tableau Products

Tableau provides several products for data analytics and visualization:

- Tableau Cloud – A cloud-based analytics platform for data analysis and secure sharing.
- Tableau Server – An on-premises platform that provides complete control over data and analytics.
- Tableau Desktop – A desktop application used to create visualizations, dashboards, and reports.
- Tableau Next – An AI-driven analytics solution for intelligent insights.
- Additional Tableau products include Tableau Prep, Tableau Mobile, and Tableau Public.

For this project, we will use Tableau Desktop.

Step 3: Download Tableau Desktop

1. Select Tableau Desktop from the available products.
2. Choose the appropriate version based on your requirements:
 - Free Trial Version
 - Licensed Version
3. Click the download button to download the setup file.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Step 4: Install Tableau Desktop

1. Locate the downloaded setup file.
2. Double-click the installer to launch the setup wizard.
3. Follow the on-screen instructions.
4. Accept the license agreement and complete the installation process.
5. Wait until the installation is successfully completed.

Step 5: Register and Activate Tableau

1. Launch Tableau Desktop after installation.
2. Sign in using your Tableau account or create a new account.
3. If using a licensed version, enter the product key for activation.
4. Complete the registration process.

Step 6: Start Using Tableau Desktop

After successful registration and activation:

- Connect to Excel, CSV, or other data sources.
- Create worksheets and visualizations.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

- Design dashboards and stories.
- Publish projects to Tableau Public or Tableau Server.

Outcome:

At the end of this process, Tableau Desktop will be successfully installed and configured on your system, enabling you to perform data analysis and build interactive dashboards for the Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau project.

6.2 – Data Connectivity

Tableau Installation

1. Visit the [Tableau Official Website](#) and open the Products menu.
2. Review the available Tableau products:
 - Tableau Cloud
 - Tableau Server
 - Tableau Desktop
 - Tableau Next
3. Select Tableau Desktop and download the setup file.
4. Run the installer and follow the on-screen instructions to complete the installation.
5. Open Tableau Desktop and sign in or register with a Tableau account.
6. Activate the software (if required) and complete the setup.
7. Tableau Desktop is now ready for connecting data sources, creating visualizations, dashboards, and stories for the Cosmetic Insights project.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sheet – 01: Category-Level Product Distribution Analysis (Packed Bubble Chart):

1. Right click data panel Select Create Calculated Field Name -Product Count Formula- Count([name]) -OK
2. Drag Brand to the Marks Card Details
3. Drag Brand to color
4. Drag product Count to size
5. Select Show me packed Bubbles.

OUTPUT:

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sheet 2: Category Wise Total Revenue (Horizontal Bar Chart):

- 1 Create a Calculated Field
- 2 Name -Total Revenue - Formula - SUM([price])
- 3 Drag Label rows
- 4 Drag Total Revenue to Columns (Sum (Total Revenue
- 5 Select Label Click Sort → Select Descending
- 6 Add Sum Total Revenue to Labels
- 7 Category to color
- 8 Click Tool lip
- 9 Category to Color
- 10 Total Revenue: Sum(price)>

OUTPUT:

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sheet3: Top 10 Brands that are Suitable for All Skin Types (Vertical Bar Chart):

- 1 Create a Calculated field
- 2 Name ALL SKIN TYPES COUNT
- 3 Formula - [combination] + [Dry] + [Normal] + [Sensitive]
- 4 click ok
- 5 worksheet name : Top 10 Brands that are suitable for ALL skin TYPES
- 6 Drag Brand to columns shelf
- 7 Drag ALL SKIN TYPES COUNT to Rows shelf.
- 8 Select the Brand field
- 9 click, sort Descending-Right-click Brand – filter
- 10 Select Top - choose By field - TOP 10 : SUM CALL SKIN TYPES COUNT)
- 11 CLICK "OK"
- 12 Drag ALL SKIN TYPES COUNT to Label on the marks card
- 13 click, Label. - check show mark Labels.
- 14 Drag Brand to color
- 15 click Tooltip
- 16 Edit : Brand : <Brand>
- 17 Product suitable for ALL SKIN TYPES:
- 18 <ALL SKIN TYPES COUNT>.

OUTPUT:

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sheet 4: Top 10 Brand by Product Count (Horizontal Bar Chart):

1 Create calculated field

2 Name - Product count

Formula - county ([product Noare])

click 'ok'

3 drag Brandt the Rows

4 Drag cosmetics (count) to columns

5 click horizontal bar chart

6 Right click Grand filter - select the TOP - choose

By field Top to COUNT (product Name)

click "ok"

7 click the sort Descending

8 brag Product count to Label

9 click Label select show mart Labels

10 Drag Brand to color

11 Tool tip-Brand: < Brand > - Total products: <product count>.

OUTPUT:

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sheet 5: Brands with Their Average Prices (Side-by-Side Bar Chart):

- 1 create calculated field.
- 2 Name -Average price + formula $ANG([Price])$
- 3 click "ok"
- 4 Drag Brand column shelf
- 5 Drag AUG (Price) -> Rows shelf select Brand field
- 6 click sort -Descending
- 7 right click Brand filter Goto TOP Select -Top 15 by AUG (price)
- 8 click "ok"
- 9 Drag AUG (price) to Label - click label show mark labels check
- 10 Right click AUG (Price) Select Default Properties number format
- 11 Drag Brand color
- 12 Tool tip click
- 13 edit : Brand: <Brand> : Average product price : <AUG (PRICE)>
- 14 Select – side by side bar chart.

OUTPUT:

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sheet 6: Category-wise Distribution of Combination Skin Products (Packed Bubble Chart):

- 1 Change Marks Automatic to Circle.
- 2 Drag Label to Color
- 3 Drag Product Count (or Cosmetic Count) to Labels to give Names.
- 4 Then drag Label to Label.
- 5 Label → Text → <Label> and sort decreasing.
- 6 Change Marks Automatic to Pie.
- 7 Drag Brands to Color
- 8 Drag Brand to Labels.
- 9 Drag Cosmetic Count to Angle.
- 10 Drag Brand to Filters and select points all.

OUTPUT:

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sheet 7: Top 10 Brands and Cosmetics Count (Pie Chart):

- 1 In the Marks card, click the drop-down menu.
- 2 Select Pie.
- 3 Drag Brand from the Data pane to Color on the Marks card.
- 4 Each brand will now have a different color.
- 5 Drag CNT(Cosmetics) (or Number of Records) to Angle. This determines the size of each pie slice.
- 6 Drag Brand to Label on the Marks card. Brand names will appear around the pie chart.
- 7 Drag Brand to the Filters shelf : In the Filter dialog : Select the Top tab. Choose By Field. Set: Top 10 By COUNT(Cosmetics) (or Number of Records).
- 8 Click OK.

OUTPUT:

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Sheet 8: Category Level Product Distribution (Horizontal Bar Chart):

- 1 Drag Label to the Rows shelf.
- 2 Drag Name to the Columns shelf.
- 3 Click the drop-down on Name and select: Measure → Count (CNT)
- 4 On the Marks card, select Bar
- 5 Drag Label to Color on the Marks card.
- 6 Each category gets a different color. Marks Card: Color → Label
- 7 Right-click Label on Rows. Choose Sort. Sort by: Field: CNT(Name) Order: Descending
- 8 Drag CNT(Name) to Label on the Marks card.

6.6 – Creativity (Font and Style)

Creativity in font and style is an important aspect of preparing an effective and professional project report. While the content of the project explains the research and analysis, the presentation style determines how easily the information can be understood by readers and evaluators. Proper use of fonts, headings, spacing, and layout improves both readability and visual appeal.

Font selection should be simple and professional. Common fonts such as Times New Roman or Calibri are widely used in academic reports because they are clear and easy to read. The font size should be consistent throughout the document, with headings slightly larger than the body text. For example, headings can be set in size 14 or 16, while the body text can remain at size 12. Bold formatting can be used for headings and important keywords to highlight the structure of the document.

Style formatting also includes proper alignment and spacing. Using justified alignment for paragraphs gives the document a neat appearance. Line spacing of 1.5 makes the text comfortable to read, while proper spacing between sections helps avoid a crowded layout. Consistent margins on all sides of the page also improve the professional presentation of the report.

Another important element of creativity is the use of visual formatting. Tables, charts, and diagrams should be clearly labelled and placed close to the related content. Limited use of colours, such as dark blue or grey for headings, can enhance the design without making the document look unprofessional. Overuse of bright or multiple colours should be avoided in academic projects.

CHAPTER – VII

FUNCTIONAL AND PERFORMANCE TESTING

7.1 – Performance Testing & Functional Testing

Step 1: Load the Cosmetics Dataset into Tableau

First, open Tableau Desktop.

Click Connect and select Microsoft Excel, which is the file format of the cosmetics dataset.

Choose the cosmetics dataset and ensure that all columns are imported correctly. The dataset should contain the following fields:

- Product Name
- Brand
- Category
- Price
- Rank
- Combination
- Dry
- Normal
- Oily
- Sensitive

Verify that the data types are assigned correctly:

- Product Name, Brand, and Category should be String data types.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

- Price and Rank should be Numeric data types.
 - Combination, Dry, Normal, Oily, and Sensitive should be Numeric or Boolean data types.
-

Step 2: Clean the Data

Remove any duplicate records, if present.

Check for missing or inconsistent values and rename fields where necessary to improve readability.

Validate fields such as Price and Rank to ensure data accuracy.

After completing the cleaning process, save the cleaned data source.

Step 3: Create Filters for the Dashboard

Create a Category Filter.

1. Drag Category to the Filters shelf.
2. Select all categories and click OK.
3. Right-click the Category filter and select Show Filter.
4. Change the filter type to either Single Value Dropdown or Multiple Value Dropdown.

This filter allows users to dynamically select categories for focused analysis of the cosmetics dataset.

Step 4: Create a Calculated Field for All Skin Types Count

Create a new calculated field by navigating to Analysis → Create Calculated Field.

Name the field ALL SKIN TYPES COUNT and use the following formula:

$SUM([Combination]) + SUM([Dry]) + SUM([Normal]) + SUM([Sensitive])$

This calculated field determines the number of products suitable for multiple skin types and helps analyze product availability across the cosmetics dataset.

Step 5: Analyze Product Distribution Across Categories

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Create a new worksheet.

1. Drag Category to the Rows shelf.
2. Drag Product Name to the Columns shelf.
3. Change the aggregation to COUNT(Product Name).
4. Select a Bar Chart visualization.

This analysis displays the distribution of products across different cosmetic categories.

Step 6: Calculate Category-Wise Total Revenue

If revenue data is not directly available, use the following calculation:

$\text{SUM}([\text{Price}])$

To create the visualization:

1. Drag Category to the Rows shelf.
2. Drag Price to the Columns shelf.
3. Set the aggregation to SUM.
4. Sort the results in descending order.
5. Add data labels.

This analysis shows the revenue contribution of each category in the cosmetics dataset.

Step 7: Find the Top 10 Brands for All Skin Types

Create a calculated field using:

$[\text{Combination}] + [\text{Dry}] + [\text{Normal}] + [\text{Sensitive}]$

Then:

1. Drag Brand to the Rows shelf.
2. Drag the calculated field to the Columns shelf.
3. Sort the results in descending order.
4. Apply a Top 10 Filter to display the leading brands.

This analysis identifies brands that offer products suitable for multiple skin types.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

Step 8: Find the Top 10 Brands by Product Count

1. Drag Brand to the Rows shelf.
2. Drag Product Name to the Columns shelf.
3. Select COUNT(Product Name).
4. Sort the results in descending order.
5. Filter the view to show the top 10 brands.

This analysis identifies brands with the highest number of products.

Step 9: Compare Average Prices Across Brands

1. Drag Brand to the Rows shelf.
2. Drag Price to the Columns shelf.
3. Change the aggregation to AVG(Price).
4. Sort the results in descending order.
5. Add data labels.

This analysis compares average product prices across brands.

Step 10: Analyze the Category-Wise Distribution of Combination Skin Products

1. Drag Category to the Rows shelf.
2. Drag Combination to the Columns shelf.
3. Use SUM(Combination) as the aggregation.
4. Select a Bar Chart.

This analysis shows the availability of products designed for combination skin across categories.

Step 11: Identify Top Brands and Cosmetic Counts

1. Drag Brand to the Rows shelf.
2. Drag Product Name to the Columns shelf.
3. Use COUNT(Product Name).

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

4. Sort the results in descending order.
5. Display the top N brands.

This analysis highlights leading brands based on product volume.

Step 12: Analyze Category-Level Product Distribution

1. Drag Category to the Rows shelf.
2. Drag Product Name to the Columns shelf.
3. Use COUNT(Product Name) as the aggregation.
4. Apply color encoding based on product count.
5. Add data labels.

This analysis provides a comparative view of product distribution among categories.

Step 13: Build the Dashboard

Click New Dashboard and define the dashboard size.

Add the following worksheets:

- Category Product Distribution
- Category Revenue
- Top 10 Brands (All Skin Types)
- Top 10 Brands by Product Count
- Average Brand Price
- Combination Skin Distribution
- Top Brands and Cosmetic Counts

Arrange the visualizations logically to create a clear and user-friendly dashboard layout.

Step 14: Add Interactive Filters

1. Click the filter dropdown menu and select Apply to Worksheets.
2. Add filters for Category, Brand, and Skin Type.
3. Enable dashboard actions to allow cross-filtering and interaction.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

As a result, all visualizations update dynamically based on user selections within the cosmetics dataset.

Step 15: Validate Dashboard Performance

Test all filter interactions and verify dashboard response times.

Check dashboard rendering and confirm that all visualizations update correctly.

Performance Summary

- Dataset Size: 1,472 rows and 10 columns
- Data Volume: Approximately 1–2 MB
- Tableau efficiently handles filtering and aggregation.
- Visualizations render smoothly with minimal response time.
- Interactive filters provide a seamless and effective data exploration experience.

CHAPTER – IX

ADVANTAGES & DISADVANTAGES

9.1 – Advantages

- A. **Better Understanding of Consumer Preferences:** Tableau helps analyse customer preferences based on skin type, product category, brand popularity, pricing, and reviews. This enables businesses to understand what consumers want and make informed decisions.
- B. **Interactive Data Visualization:** Tableau transforms complex cosmetic data into easy-to-understand charts, graphs, dashboards, and stories. Users can interact with visualizations to explore trends and patterns effectively.
- C. **Identification of Market Trends:** The project helps identify emerging beauty and cosmetic trends, popular brands, and high-demand product categories, allowing companies to stay competitive in the market.
- D. **Improved Business Decision-Making:** By providing real-time insights into sales, pricing, and customer behaviour, Tableau supports data-driven decision-making and strategic planning.
- E. **Efficient Data Analysis:** Large cosmetic datasets can be analysed quickly and accurately. Tableau reduces manual effort and helps users discover valuable insights within minutes.
- F. **Enhanced Customer Satisfaction:** Understanding consumer needs and product performance helps companies develop better products and marketing strategies, leading to improved customer satisfaction.
- G. **User-Friendly Dashboard Creation:** Tableau provides drag-and-drop functionality, making it easy for users to create professional dashboards without extensive programming knowledge.
- H. **Comprehensive Reporting:** The project combines multiple analyses such as category distribution, top brands, skin-type suitability, and price comparisons into a single platform for comprehensive reporting.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

9.2 – Disadvantages

- a. **Data Quality Dependency:** The accuracy of insights depends on the quality and completeness of the dataset. Incorrect or missing data can lead to misleading conclusions.
- b. **Limited Predictive Analytics:** Tableau primarily focuses on visualization and descriptive analysis. Advanced predictive modeling often requires integration with other tools or programming languages.
- c. **Learning Curve for Beginners:** Although Tableau is user-friendly, beginners may need time to learn advanced features such as calculated fields, parameters, filters, and dashboard design.
- d. **Performance Issues with Large Datasets:** When handling extremely large cosmetic datasets, dashboard performance may slow down, affecting user experience.
- e. **Licensing Cost:** Tableau is a premium business intelligence tool, and licensing costs may be expensive for small organizations or individual users.
- f. **Limited Data Preparation Features:** Complex data cleaning and transformation tasks may require external tools before importing data into Tableau.
- g. **Risk of Misinterpretation:** Users may misinterpret visualizations if charts are not designed properly or if they lack sufficient understanding of the data context.
- h. **Dependence on Data Updates:** To maintain accurate insights, datasets must be updated regularly. Outdated information can reduce the reliability of the analysis.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

CHAPTER – X

CONCLUSION

10.1 – Conclusion

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau is a data-driven project that demonstrates how business intelligence and data visualization can be used to understand consumer behaviour and market trends in the cosmetics industry. By analysing cosmetic product data through Tableau dashboards and stories, the project provides valuable insights into product categories, brand performance, pricing patterns, and skin-type suitability.

The analysis helps identify the most popular brands, product distributions across categories, and consumer preferences based on different skin types. Interactive dashboards enable users to explore data efficiently, making it easier to uncover trends and patterns that may not be visible through traditional reporting methods. These insights can support businesses in improving product development, marketing strategies, inventory management, and customer engagement.

One of the major strengths of this project is its ability to transform large volumes of cosmetic data into meaningful and visually appealing reports. Tableau's powerful visualization capabilities allow stakeholders to make informed decisions quickly and effectively. The project also highlights the importance of understanding customer needs and market demands in a highly competitive beauty and personal care industry.

Furthermore, the findings can assist cosmetic companies in identifying growth opportunities, understanding customer preferences, and enhancing overall business performance. The use of interactive filters, charts, and dashboards provides a comprehensive view of the market, helping organizations adapt to changing consumer trends and make strategic decisions based on reliable data.

In conclusion, Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau successfully showcases the value of data analytics in the cosmetics sector. The project demonstrates how Tableau can be used to convert raw data into actionable insights, enabling businesses to better understand their customers, monitor market trends, and achieve sustainable growth. By leveraging data visualization and analytical techniques, organizations can gain a competitive advantage and make smarter, data-driven decisions in the evolving cosmetics industry.

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau

CHAPTER – XI

FUTURE SCOPE

11.1 - Future Scope

- a. Real-Time Data Integration
 - Connect Tableau with live cosmetic sales and e-commerce data sources.
 - Monitor market trends and consumer behaviour in real time.
- b. Predictive Analytics
 - Forecast future product demand and cosmetic trends.
 - Predict customer purchasing patterns using historical data.
- c. Machine Learning Integration
 - Apply machine learning models for advanced trend analysis.
 - Improve business decision-making through intelligent predictions.
- d. Sentiment Analysis
 - Analyse customer reviews and social media comments.
 - Understand customer satisfaction and brand perception.
- e. Personalized Product Recommendations
 - Recommend products based on skin type and customer preferences.
 - Enhance user experience and customer engagement.
- f. Geographical Market Analysis
 - Study cosmetic trends across different regions and countries.
 - Identify location-based customer preferences.
- g. Mobile and Cloud-Based Dashboards
 - Enable access to dashboards from smartphones and tablets.
 - Improve accessibility and collaboration through cloud platforms.
- h. Competitive Brand Analysis
 - Compare brand performance and market share.
 - Identify strengths and weaknesses of competing brands.
- i. Advanced Customer Segmentation
 - Group customers based on demographics and buying behaviour.
 - Develop targeted marketing strategies.
- j. Sustainability and Eco-Friendly Product Analysis
 - Analyse demand for organic and environmentally friendly cosmetics.
 - Support sustainable business practices.
- k. Enhanced Interactive Dashboards
 - Add advanced filters, parameters, and drill-down features.
 - Provide deeper and more detailed insights.
- l. Business Decision Support System
 - Transform the project into a comprehensive analytics platform.
 - Support strategic planning and market growth initiatives.
